IMMIGRANT SONG

by Jimmy Page/Robert Plant

© 1970 SUPERHYPE PUBLISHING

IMMIGRANT SONG

GUITAR

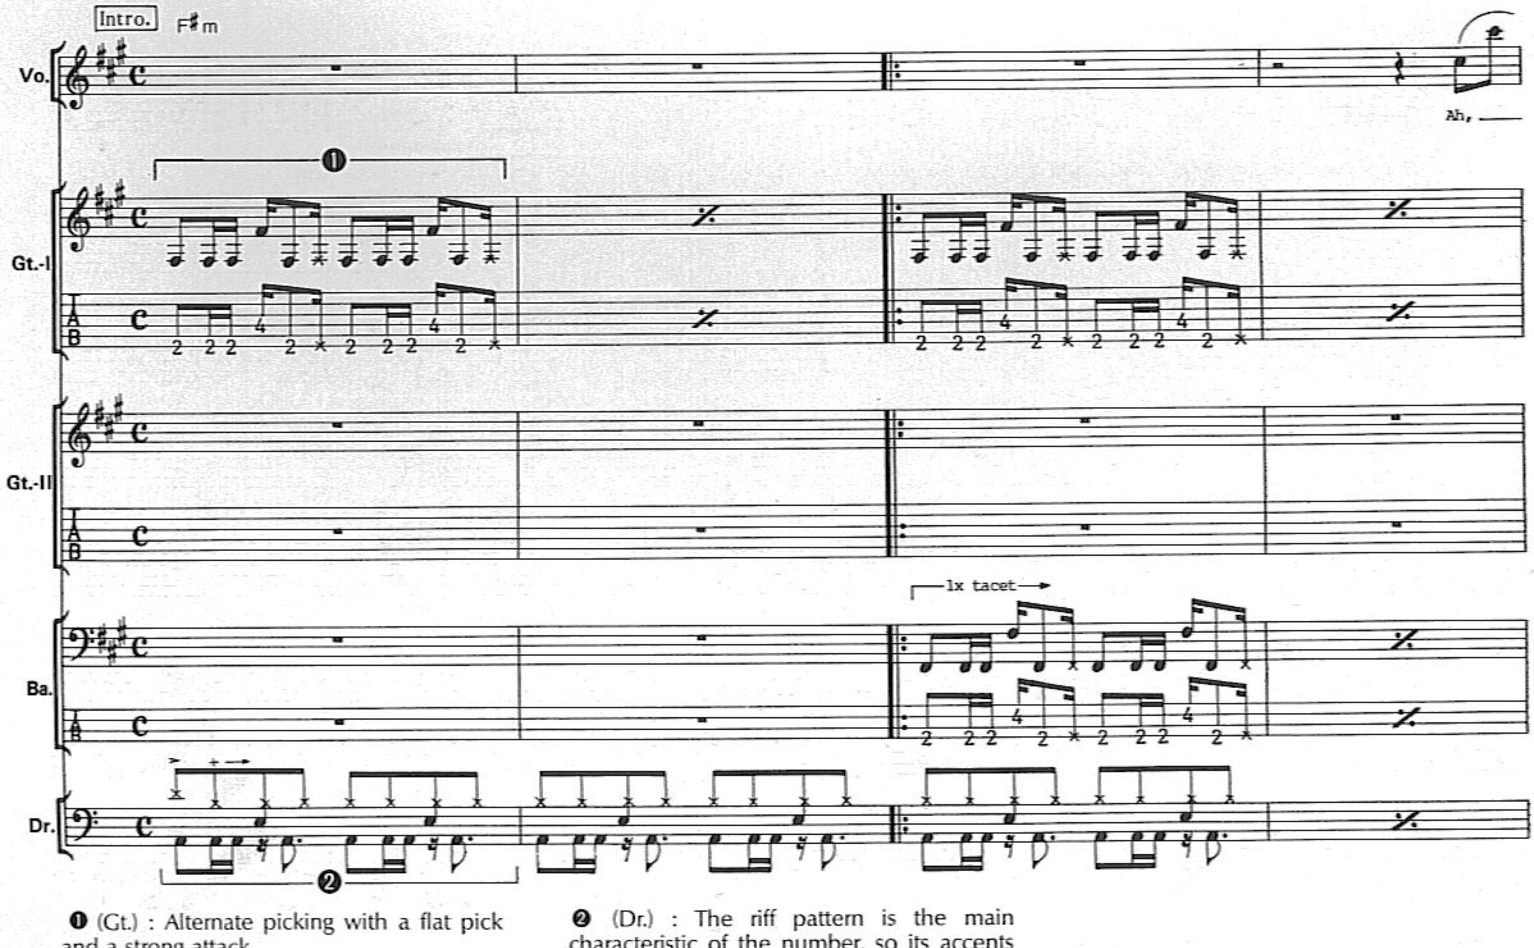
"Immigrant Song" starts with a powerful punchy 16 beat guitar riff. It is a short number with no solo, so the guitarist's function is to provide the tight rhythmic backing for the band, which should be strong and concentrated.

BASS

The exciting bass part calls for powerful picking in unison with the guitar. The riff pattern is changeable, so the bass rhythm must be tight and accurate. Play with the treble well up for a more guitar-like sound, and stay right with the tight beat.

DRUMS

The drum part throughout the number consists of the same bass drum pattern and strong snare hits on the second and fourth beats of the bar. There are no fills and only the cymbals are used for accents, so each beat needs to be accurate and played with the right balance. The main point is the rhythm of the bass drum on the first and second beats, so practise until this goes really smoothly.



❶ (Gt.) : Alternate picking with a flat pick and a strong attack.

❷ (Dr.) : The riff pattern is the main characteristic of the number, so its accents must be practised until they are exact.

FRIENDS

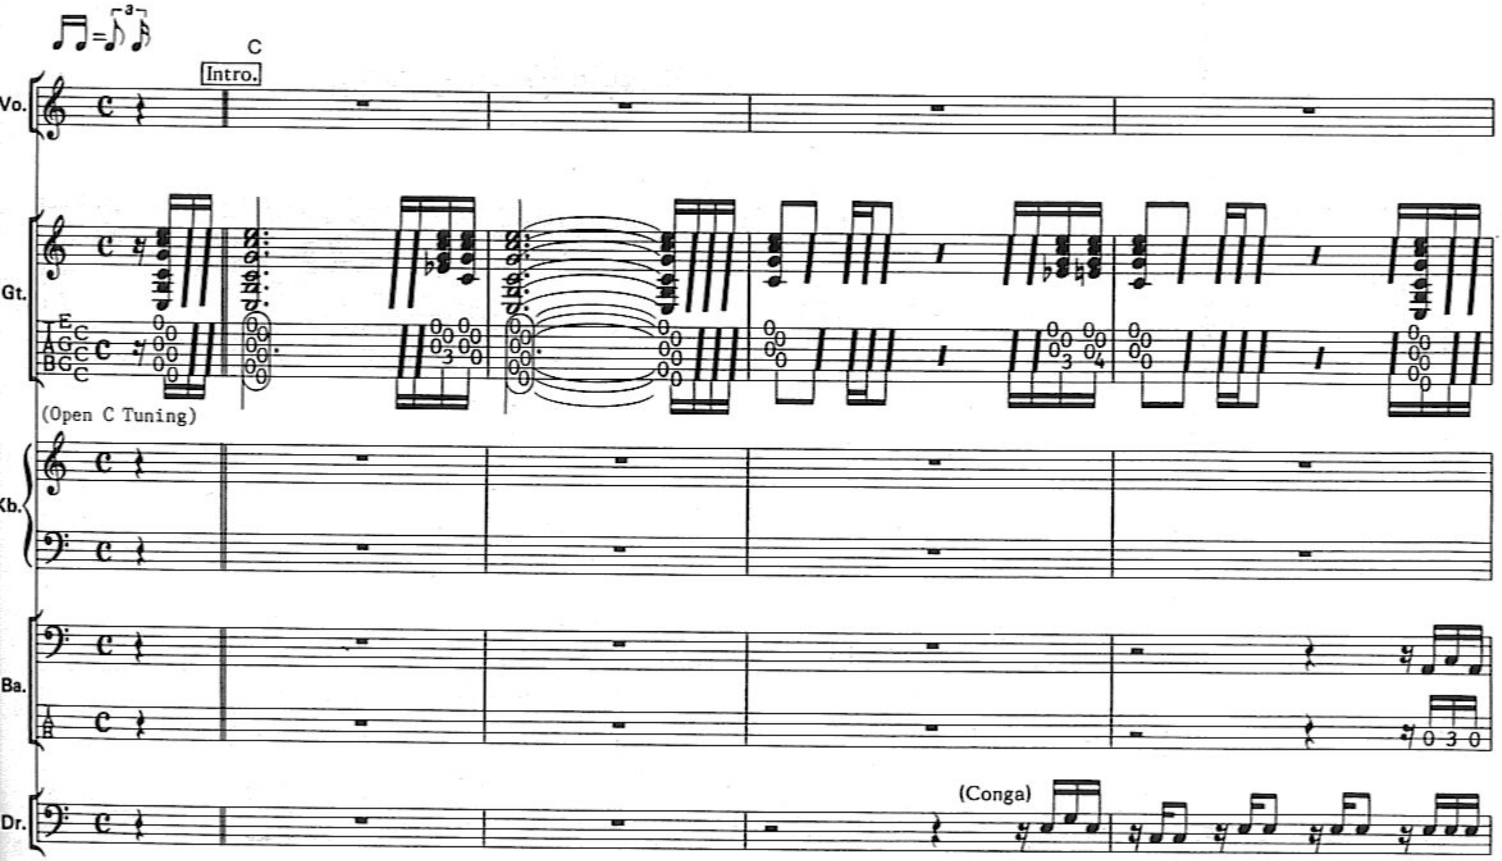
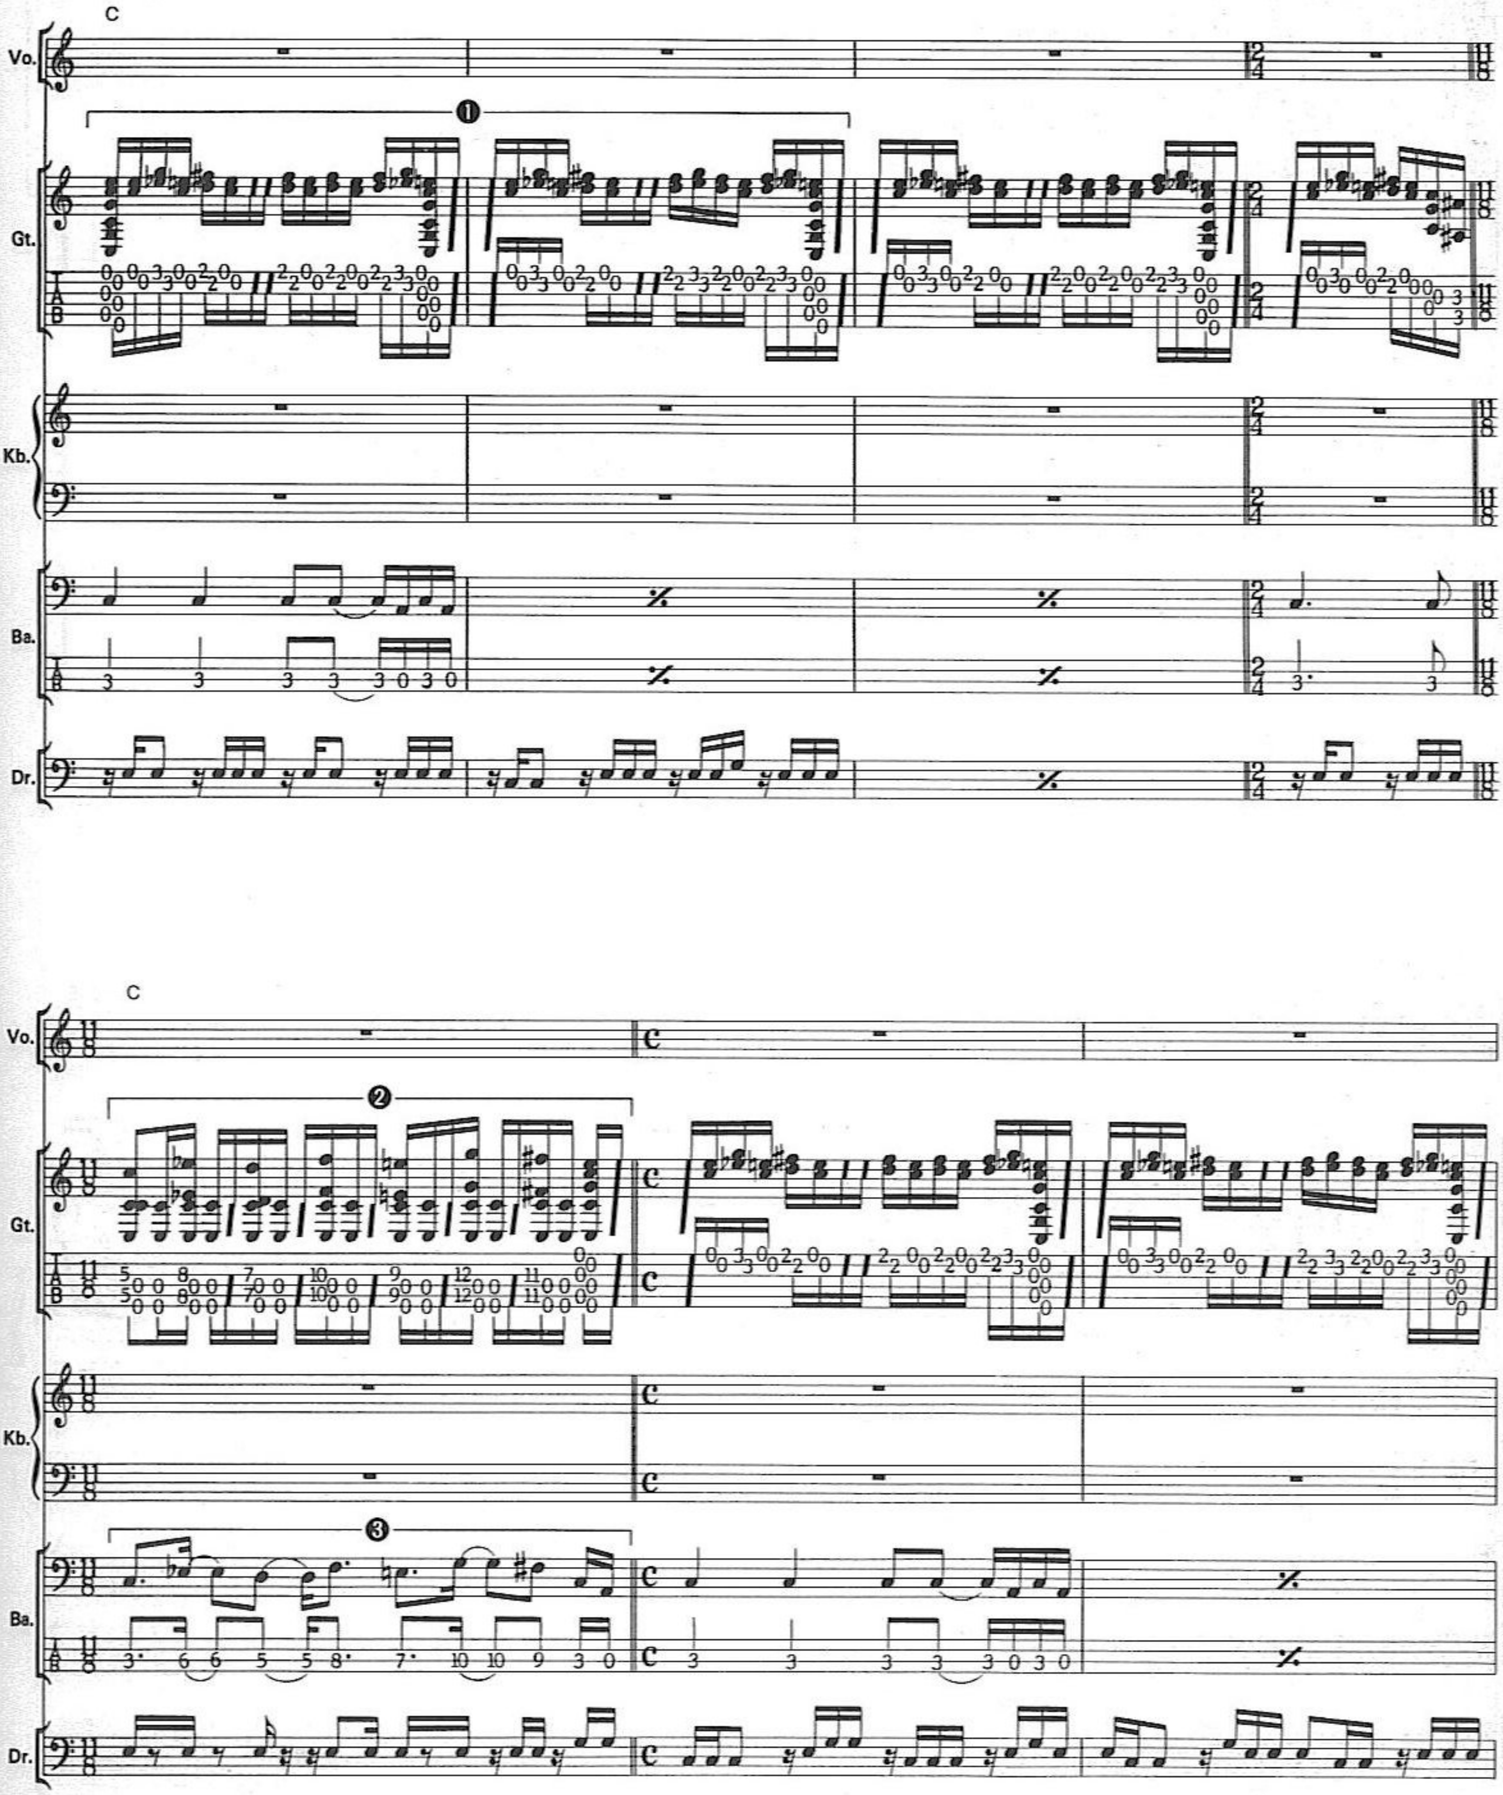
GUITAR

This song is based on C and played with open C tuning. The main point is the use of the open string in the riff, which is sometimes wild and sometimes delicate. The guitar backing is the basis of the song, so aim to achieve a smoothness in your playing by a light touch when cutting.

BASS

A simple bass line with few notes allows the bass guitarist to concentrate on blending in with the other instruments. Special attention should be paid to the timing both in the unison sections with the strings and in the 11/8 sections.





❶ (Gt.) : This is the main pattern, which makes the most of the first and second strings, but without muting. The main point is to bring out clearly the contrast between the sounded chord and the melody of the riff.

❷ (Gt.) : In this bar the time changes to 11/8, and guitar and bass play in unison, so watch out for wrong notes; keep it accurate.

❸ (Ba.) : The whole song is in eight beats to the bar, but in places like this where the rhythm might be difficult to pick up, you would do well first to master the phrase and then fit it to the eight beat count later.

CELEBRATION DAY

by Jimmy Page/Robert Plant/John Paul Jones

© 1970 SUPERHYPE PUBLISHING

CELEBRATION DAY

GUITAR

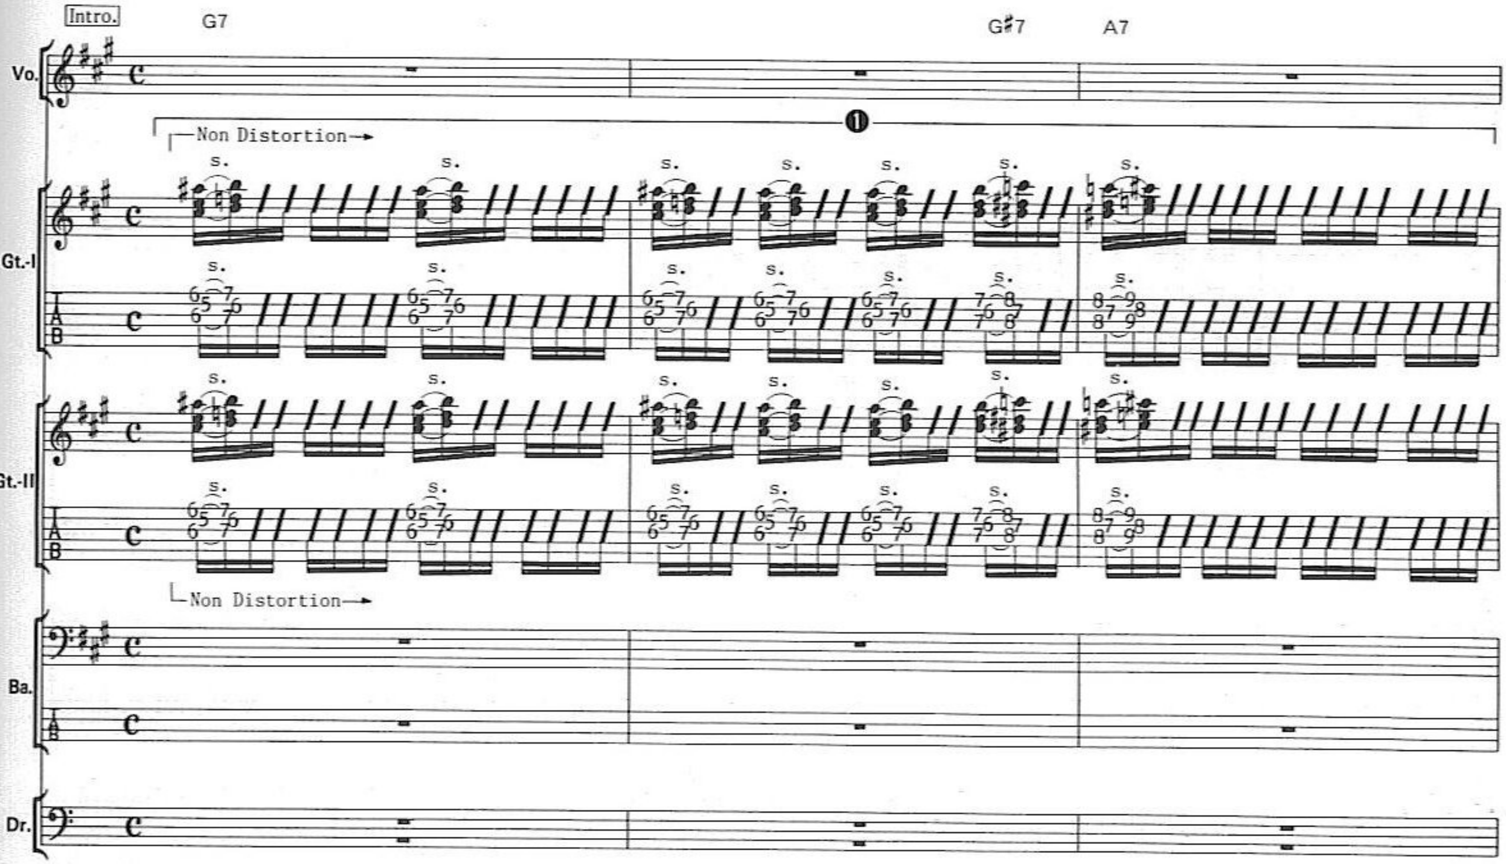
One of the classic Zeppelin numbers which features some truly characteristic riffing from Jimmy Page. Make sure you're really on top of the slides and bends which make up the main riff before trying for the powerful rhythm section drive, and then accent the rhythm as you go.

BASS

The bass needs clean hard picking which brings out the offbeat, where the timekeeping must be especially exact. The bass line should be powerful and energetic without being either too even or too jerky.

DRUMS

A basic eight beat pattern with an offbeat feel. The main point for the drummer is how to bring out that tremendous drive with such a simple pattern. Despite this seeming simplicity, it's best to go for a careful approach, building up the phrases gradually.



❶ (Gt.) : This section calls for tight cutting, accurate slides and exact rhythm.

Fade Out

SINCE I'VE BEEN LOVING YOU

by Jimmy Page/Robert Plant/John Bonham

© 1970 SUPERHYPE PUBLISHING

SINCE I'VE BEEN LOVING YOU

GUITAR

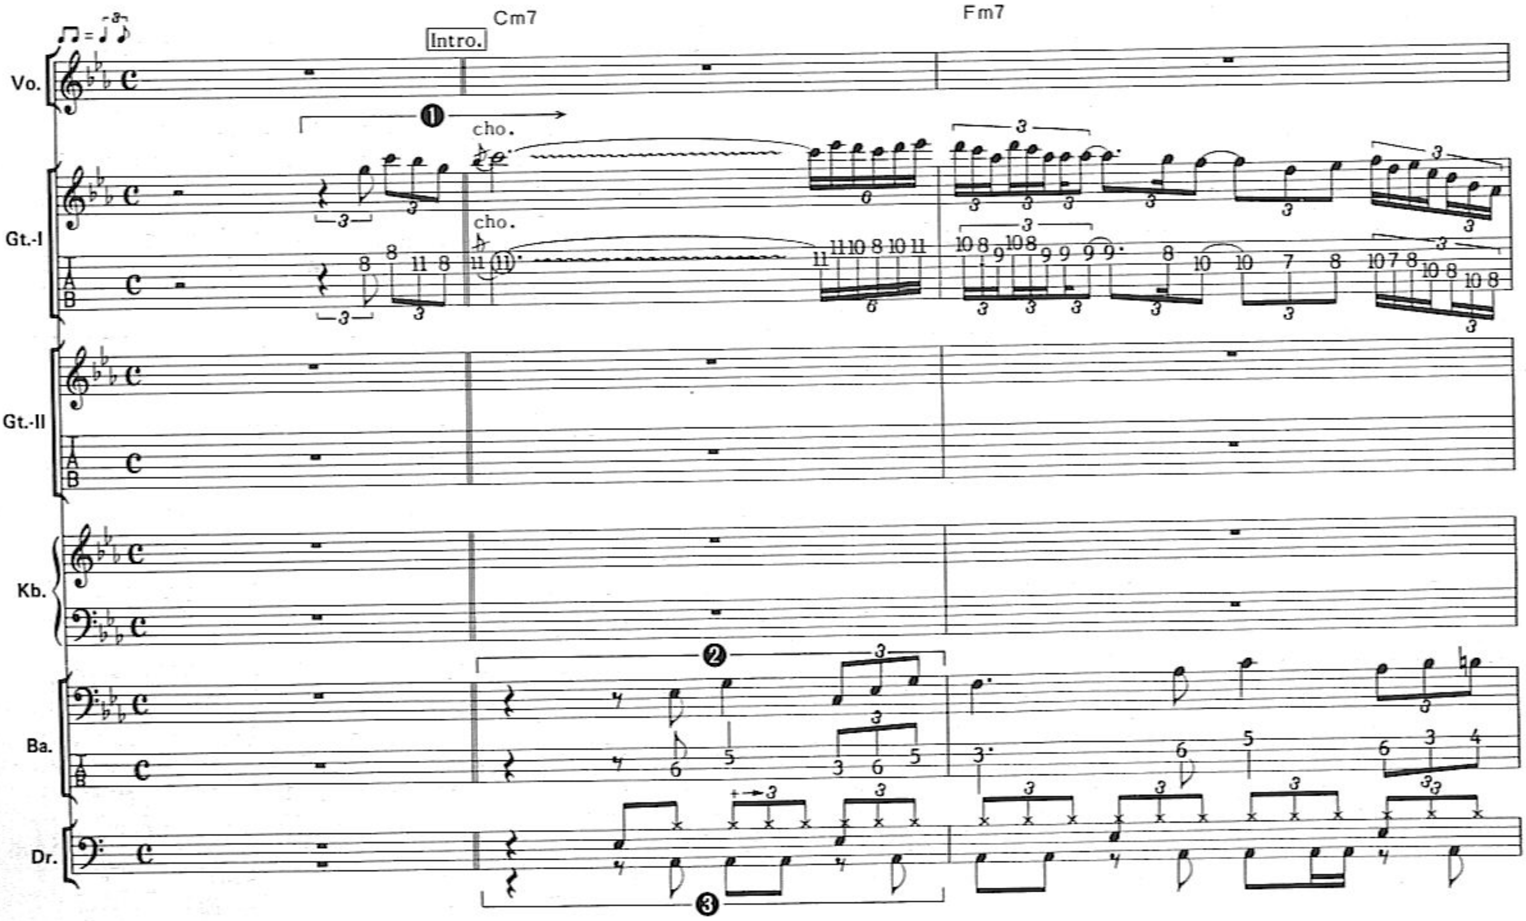
Full of the bluesy phrases for which Jimmy Page is renowned, "Since I've Been Loving You" requires a considerable amount of technique, but it's worthwhile adding it to your repertoire if you're interested in mastering the feeling and phrasing of blues guitar. You can learn a lot in that direction from just this one song.

BASS

A slow minor key blues number with the rhythm in triplets. For the bass guitarist, the main point, in addition to keeping in with the restrained rhythm, is the need for a heavy broad sound. For the most part, the bass line centres on the root notes of the chords, but there's no fixed pattern, so the main thing is how to blend in with the overall mood of the song. A really laid-back feel is essential.

DRUMS

The drumming on this song needs to be powerful and restrained yet very relaxed. There's a variety of fills: eight beat, sixteen beat, triplets, sextuplets, and it's a challenge to the drummer to negotiate their way smoothly through them. The central rhythm, however, is the triplet. Listen closely to the guitar for the climax points.



❶ (Gt.) : The bends should be restrained and relaxed, the picking light and the phrasing smooth.

❷ (Ba.) : Feel the rhythm from the drummer's snare entry on the second beat of the bar.

❸ (Dr.) : The rhythm of this bar sets the tone for the whole song, so be sure to get it right.

OUT ON THE TILES

by Jimmy Page/Robert Plant/John Bonham

© 1970 SUPERHYPE PUBLISHING

OUT ON THE TILES

GUITAR

The key to the guitar part for this song is the crunchy distortion sound. A number of the riffs are played on non-muted lower strings, so take care not to distort the sound too much and watch the pitch of your low string bends. Timing with the bass player must be exact, as a lot of the riffs are in unison.

BASS

For the many 16 beat unison riffs with the guitar, the bass-playing needs to be hard-edged. In the places where you can use two finger picking, pay extra attention to synchronising with the left hand, and where bends are called for in the middle of a pattern, be careful to align the pitch with that of the guitarist.

DRUMS

The basic rhythm is a medium tempo 8 beat, but here and there the bass drum plays 16 beats, and the whole thing has quite a driving forward feel to it. There are a lot of sextuplet fills which call for accurate timekeeping, and good timing is also essential for the snare/bass drum combination work, so practise until you've got the rhythm really smooth.

❻(Gt.) : A moving chord pattern with the root on the 5th string while the 16th note Es on the open 6th string are played at the same time - accurately!

❼(Dr.) : From here on, the hi-hat is played with the pedal only, while the hands play the cymbals as usual.

❽(Dr.) : A sextuplet phrase on snare and tom-toms; keep your hi-hat timing steady.

LED ZEPPELIN

GALLOWS POLE

Traditional/Arrangement by Jimmy Page/Robert Plant

© 1971 SUPERHYPE PUBLISHING

GALLOWS POLE

GUITAR

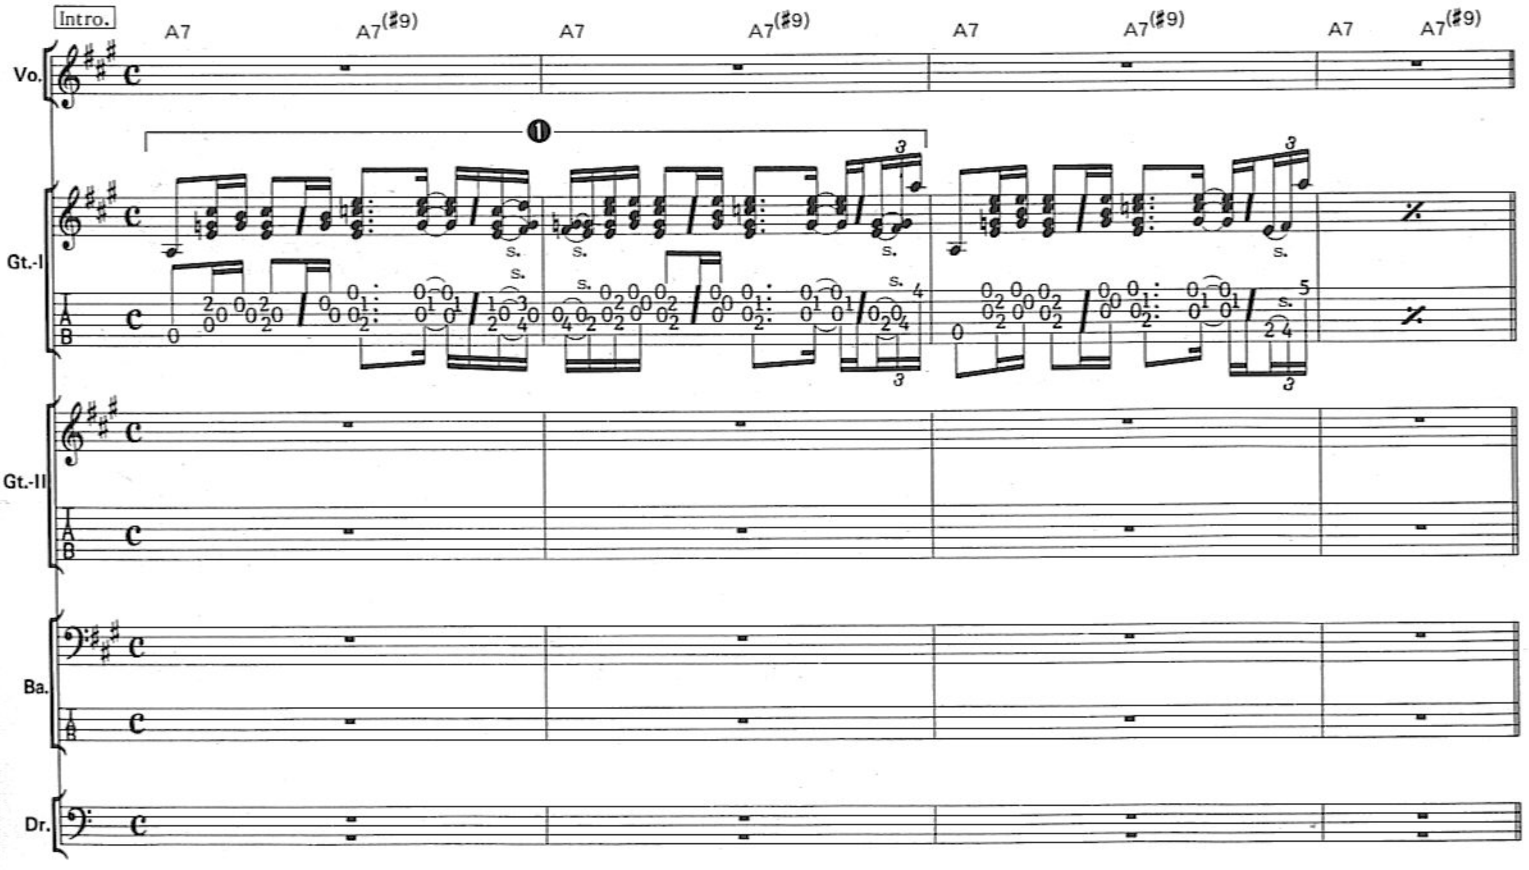
From the gentle sounds of its opening solo acoustic guitar to the eventual entry of the overdrive pedal steel guitar, this is a song which really raises a storm. The electric guitar style of the backing riff in the latter half is especially noteworthy. The pedal steel guitar phrases towards the end should be played just as if on a regular guitar.

BASS

The bass line is basically in eight beats, but it has a staccato feel to it, so don't let the notes spread out too much. There are syncopated 16 beat phrases in the second half which call for strict timekeeping. You'd do well to practise first with a metronome.

DRUMS

The drum part consists only of snare and bass drum combinations, and sounds at first like a simple eight beat, but notice the 16th note offbeats on the bass drum. With 16 beat phrases on the snare, always accent the first note and play the others very softly without getting caught up by the bass drum timing.



①(Gt.) : The main riff here makes skillful use of open strings. The C at 2/1 sounds really good. Chordwise, change from A7 to Am7 and then simply slide along two frets.

TANGERINE

by Jimmy Page

© 1970 SUPERHYPE PUBLISHING

TANGERINE

GUITAR

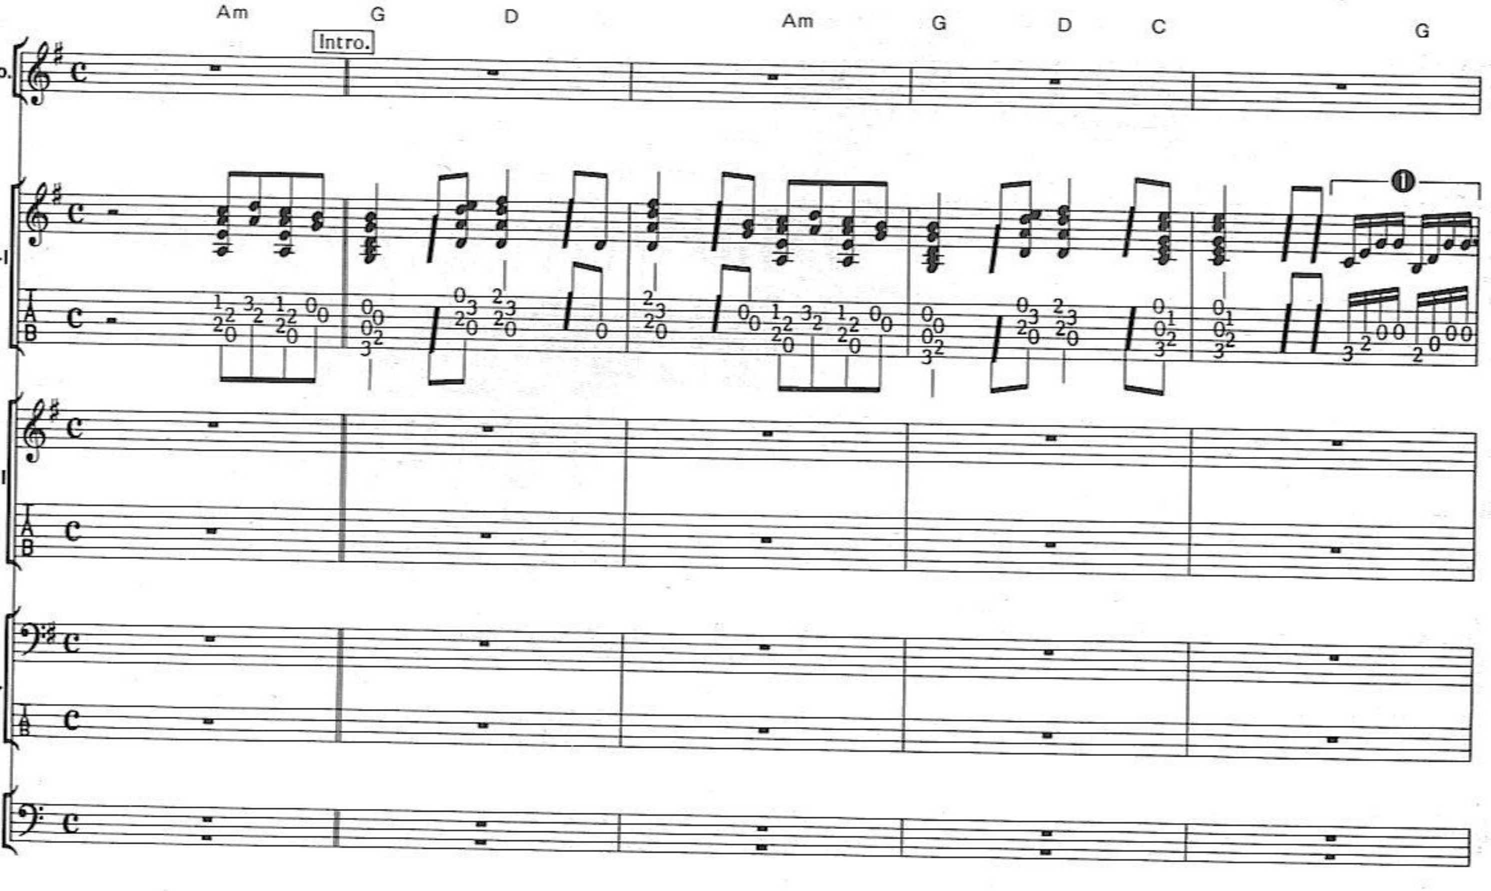
In the impressive 12 string acoustic intro, there's much use of open strings in the low chords, so it's very easy to play. Another characteristic of the song is the two "shades" of pedal steel guitar, overdrive and distortion-free, while the solo features bottleneck playing.

BASS

This is a comparatively slow eight beat number, and there are no difficult phrases for the bassist. The accent is on the first beat of each bar, and the mood should be relaxed and laid-back. There are several long breaks for the bass and drums, so watch the tempo when you come back in. It's best to play silently through the breaks.

DRUMS

The rhythm is the most basic eight beat pattern, and as it's a difficult tempo to get any kind of mood out of, you can at least add a nuance by setting the hi-hat a little loose. Strict timekeeping is not the name of the game in this number, rather let your strokes be very relaxed and even a touch delayed. Mistakes tend to stick out all the more with such a simple pattern, so any kind of roughness should be avoided.



❶ (Gt.) : The two continuous G notes here (3/6) suddenly sound different, but actually, they aren't. The trick is to use alternate picking. If you play both with the same downward stroke, they sound completely different.

THAT'S THE WAY

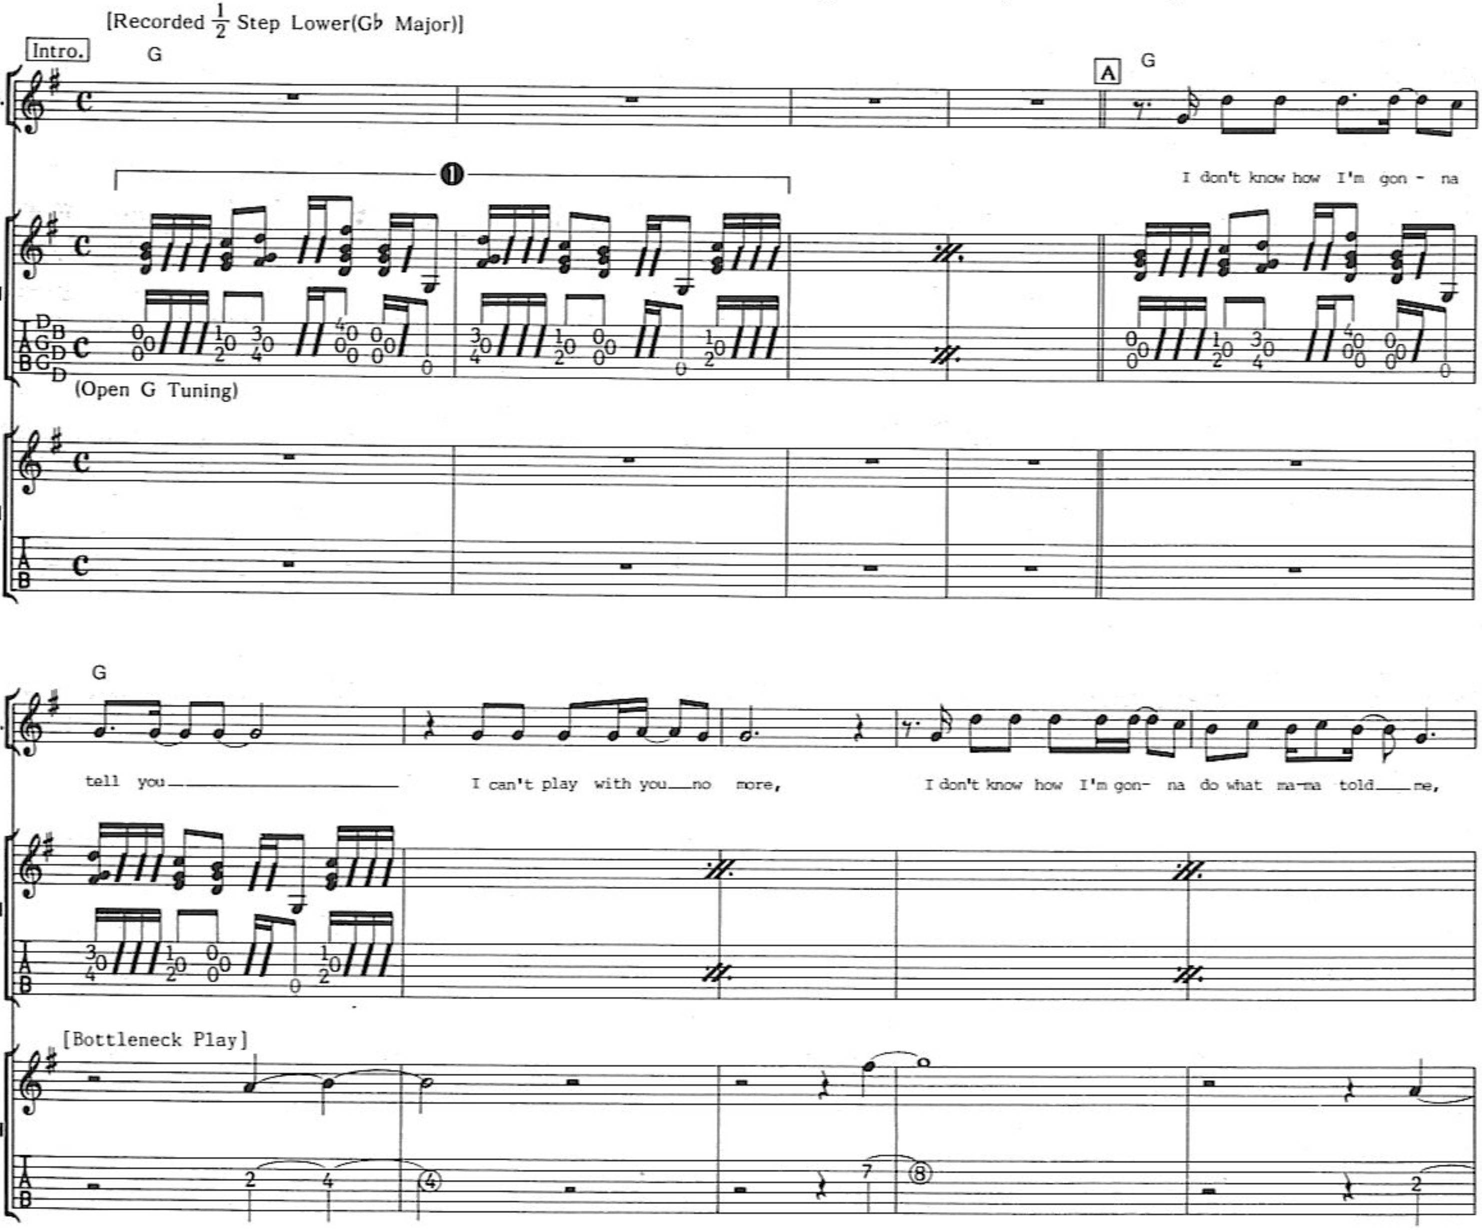
GUITAR

The combination of the drawn out acoustic guitar riff and the sound of the pedal steel guitar in the back is very impressive. We've shown the pedal steel guitar part as written for normal guitar plus bottleneck. Note that there are a number of places which require you to play with the other fingers of the left hand when you have the bottleneck on.

BASS

The bass enters only towards the end and there are no difficulties for the bassist. Just watch your timing on the first beat of the bar and don't let the tempo slip. The bass line in this song needs to blend well with the other instruments. There's a long wait before the bass entry, and it's important to feel that you're playing along with the guitarist while you're waiting.



[Recorded 1/2 Step Lower(G♭ Major)]

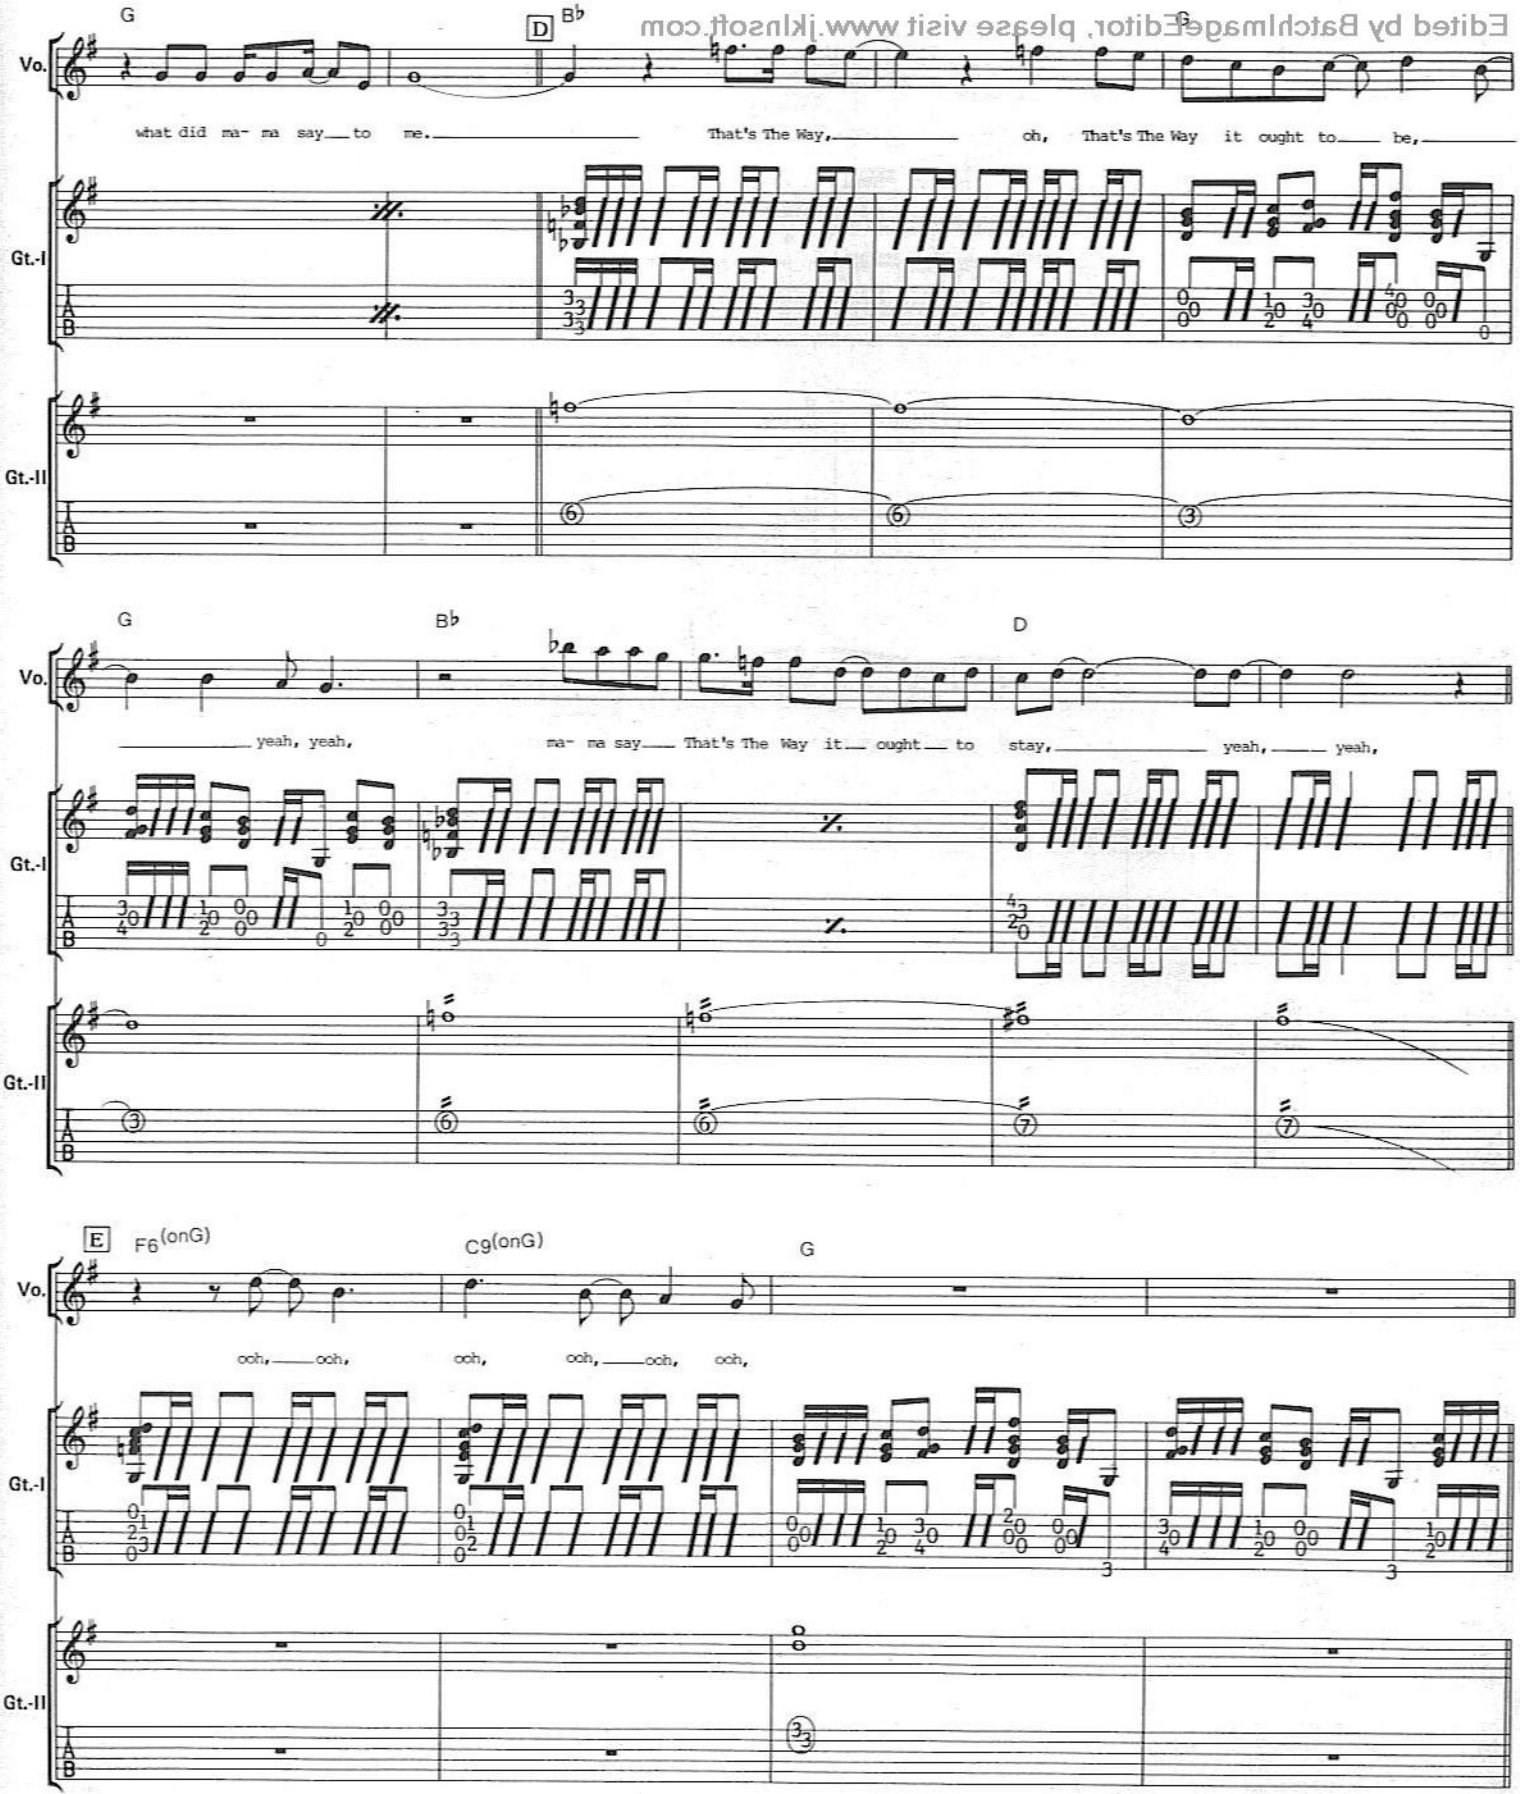
walk - ing
why don't your eyes see me,
could it be you've found an - oth- er game to play,

❷(Gt.) : The bottleneck is normally used by Gt.-II, but this section you can play by pulling-off and sliding. There's no problem if the bottleneck is on the ring or the little finger.

❸ (Gt.) : Here you have two notes at the same fret, so this calls for the bottleneck. The slides at 2/15 and 3/16 can be negotiated by straddling the bottleneck diagonally across both positions.



G

BRON-Y-AUR STOMP

by Jimmy Page/Robert Plant/John Paul Jones

© 1970 SUPERHYPE PUBLISHING

BRON-Y-AUR STOMP

GUITAR

There are a lot of tempo changes in Bron-Y-Aur Stomp, and the different colours of the guitar sound play a very important role. The open tuning arpeggios should be played with a flat pick and plenty of attack. Practise the tempo change sections repeatedly until you can manage them smoothly.

BASS

A double bass style of playing which supports the vocal line is the main point in this song. If you're using an electric bass, soften the tone and slightly mute the sound throughout. Try to find the setting which you feel comes closest to the double bass sound.

DRUMS

It's interesting to note how such a simple hi-hat and bass drum combination can create such a driving rhythm. You'll need to take a little extra care over the tempo changes where they occur, and rehearse them as patterns. The hi-hat can be played with sticks, and the bass drum tuning should be set low.

HATS OFF TO (ROY) HARPER

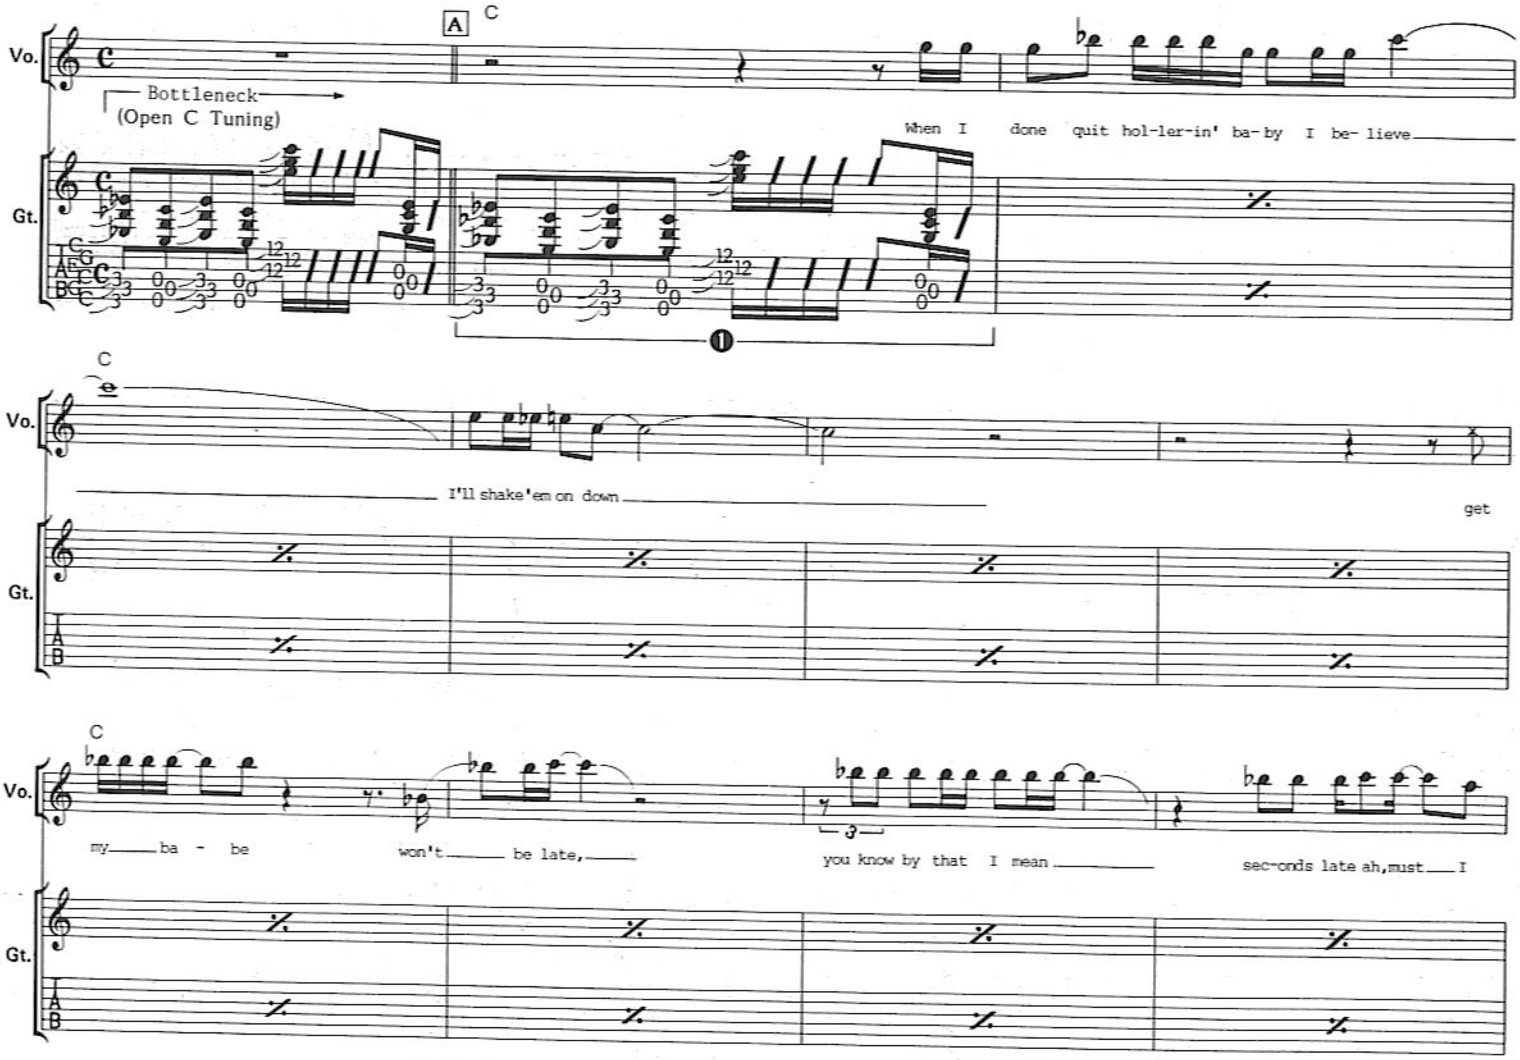
Traditional/Arrangement by Charles Obscure

© 1971 SUPERHYPE PUBLISHING

HATS OFF TO (ROY) HARPER

GUITAR

A bluesy bottleneck number in open C tuning. A solo guitar provides the only backing, so the main point is the breathing between guitar and vocals. Also, mind your pitch doesn't start to wander because of the low tuning.



A
C
